Project meeting in Spanish city Castellon de la Plana

All the partners had a chance to meet again to work on the project progress. Meeting in Spanish city **Castellon de la Plana** which is placed on the sea shore in Valencian region had two major aims.

First one was to summarize and check all the activities related to **IO3 – on-line training course** and the second one was to discuss and decide how partnership will work on creation of IO4 – **career guidance tool**.

What else happened in Castellon de la Plana

Besides all the work related to the intellectual outputs, all the other important project tasks such as **dissemination, project management** and **administrative** issues were discussed and moved towards successful project closure.

Spanish organizer FUE-UJI showed us whole university campus in its great size and with its modern inspiring equipment which attract the students to spend their university time here and prepare for their bright futures.

On-line training course - project IO3

An **on-line training course** which is accessible through the project website (<https://restatproject.eu/training-course/>) got a new quick guide "**How to enroll in our course**" for easier orientation of the course users.

Career guidance tool system of work

RESTAT's Career Guidance Tool will take the form of an online platform microsite. The Tool:

- will identify and aggregate an individualized skills portfolio and competences in correspondence with a **multitude of employment** types and sectors.
- will generate a **tailor-made employment** guidance module going beyond existing generic validation tools, offering effective support to translate skills into real human capital.
- will provide users the opportunity to **interact with the platform**, evaluate and comment on sector skills recommendations.

Career guidance tool as the last project output

Are you questioning yourself, your current or future employees **where is your right work position?** Whether your skills are useful **in accessible tourism sector or not?**

For those answer seekers there is another project tool in development process. **Career guidance tool** should help anyone interested to find out **which position or positions in accessible tourism sector would be convenient for their specific skills.**

One part of the career guidance tool work with **personal characteristics**, while other works **with knowledge** which is possible to acquire through long time practise in accessible tourism sector or through RESTAT project developed educational tools – **Skill endorsing tool** and **On-line educational course**.

Skills prioritized as crucial for accessible tourism in **Skills endorsing tool (IQ1)** are checked again in **Career guidance tool** to help to give us the answer.

Coordinator

IO4 Next steps

There is about 3 months of intensive work on IO4 Career guidance tool development.

1. **Development of Profiling Method** - to complement the results generated from O2 and O3, set of questions and test items for one's personality and surrounding context in order to obtain a contextualized insight into one's competences and potential.
2. **Jobs' Analysis and development of Career-matching method** - the partnership will examine the set of 24 most relevant jobs collected from IO1 and break them down to necessary constituent skills and qualities.
3. **Programming of the Career Guidance Tool directly as a built-in element on the RESTAT's website** in interactive, user-friendly interface with rich formats.

4. **Tool testing and revision** - a testing plan developed in line with EQAVET quality control methods will be implemented. A Pilot test will be organized in each partners' country. Due the pilot test results, adjustments will be made subsequently.

5. **Manual on how to use and exploit the Career Guidance Tool** will be prepared as the last step based on overall comparative report summarizing pilot tests results from all the partner countries.

5th TRANSNATIONAL MEETING and project closure

The last project meeting is planned to take place **in Ostrava (Czech Republic) in January 2022**. Project meeting will be organized by **Handy Club Ostrava**.

During this meeting, all the work on the project outputs should be finished. Last steps for the project realization decided, dissemination activities checked and added.

Period of development will finish, at the same time a new period of the using tools will start.
